

Simpler to operate, more ergonomic, and safer

Tibo launches a new-generation deep drilling machine

Pfullingen near Stuttgart, 11. November 2019

Tibo Tiefbohrtechnik GmbH has extended its range of single-lip deep drilling machines with the launch of a new model, the E40 // 1-1000. This machine signals the start of a new generation according to the company, which presented the product at the EMO in Hanover, the world's leading metalworking trade fair. In addition to the new design, this generation of drilling machines is distinguished by simpler guidance for operators, improved ergonomics and increased safety.

25 years of Tibo

This year, Tibo is commemorating 25 years of experience in the marketplace. To mark this anniversary, the company raffled off a Vespa scooter during the trade fair. It has now been handed over to the winner, Markus Schmidt of Winkelmann Powertrain Components GmbH, in a ceremony at Tibo's factory in Pfullingen.

"With such an attractive prize, the raffle at EMO definitely helped drive the impressive visitor figures to our stand. But the real reason for so much traffic was the high level of interest in our solutions. In this case, the presentation of our latest deep drilling machine E40 // 1-1000 drew considerable attention with its new design, its wide range of extensions and numerous improvements", says Jost Eppinger, Managing Director of Tibo.

About Tibo: Founded in 1994, TIBO Tiefbohrtechnik GmbH specializes in the design and manufacture of high-precision, fast-working and durable deep drilling machines. The company, which is represented internationally with a global sales network, is now one of the world's leading suppliers of single- and multi-spindle single-lip and BTA deep drilling machines, covering a wide range of applications. Thanks to its modular system, products can be tailored precisely to the requirements of each customer and their specific drilling tasks. Together with collaborating partner Gehring Technologies, Tibo can also offer end-to-end process solutions from deep drilling to honing. The engineering company, which is part of a medium-sized holding group with interests in 14 companies and more than 1000 employees, is headquartered in Pfullingen, Baden-Württemberg.
